## Definition and Usage

---

The `<article>` tag specifies independent, self-contained content.

An article should make sense on its own and it should be possible to distribute it independently from the rest of the site.

Potential sources for the `<article>` element:

- Blog post
- News story

**Note:** The `<article>` element does not render as anything special in a browser. However, you can use CSS to style the `<article>` element (see example below).

## Browser Support

---

The numbers in the table specify the first browser version that fully supports the element.
