

HTML Links - Create Bookmark

 [w3schools.com/html/html_links_bookmarks.asp](https://www.w3schools.com/html/html_links_bookmarks.asp)

HTML links can be used to create bookmarks, so that readers can jump to specific parts of a web page.

Create a Bookmark in HTML

Bookmarks can be useful if a web page is very long.

To create a bookmark - first create the bookmark, then add a link to it.

When the link is clicked, the page will scroll down or up to the location with the bookmark.

Example

First, use the `id` attribute to create a bookmark:

```
<h2 id="C4">Chapter 4</h2>
```

Then, add a link to the bookmark ("Jump to Chapter 4"), from within the same page:

Example

```
<a href="#C4">Jump to Chapter 4</a>
```

[Try it Yourself »](#)

You can also add a link to a bookmark on another page:

```
<a href="html_demo.html#C4">Jump to Chapter 4</a>
```

Chapter Summary

- Use the `id` attribute (`id="value"`) to define bookmarks in a page
- Use the `href` attribute (`href="#value"`) to link to the bookmark

HTML Link Tags

Tag	Description
-----	-------------

<code><a></code>	Defines a hyperlink
