HTML nav Tag

Example

A set of navigation links:

```
<nav>
  <a href="/html/">HTML</a> |
  <a href="/css/">CSS</a> |
  <a href="/js/">JavaScript</a> |
  <a href="/python/">Python</a>
</nav>
```

Definition and Usage

The <nav> tag defines a set of navigation links.

Notice that NOT all links of a document should be inside a <nav> element. The <nav> element is intended only for major blocks of navigation links.

Browsers, such as screen readers for disabled users, can use this element to determine whether to omit the initial rendering of this content.

Browser Support

The numbers in the table specify the first browser version that fully supports the element.

Element					
<nav>	5.0	9.0	4.0	5.0	11.1

Global Attributes

The <nav> tag also supports the Global Attributes in HTML.

Event Attributes

The <nav> tag also supports the Event Attributes in HTML.

Default CSS Settings

Most browsers will display the `<nav>` element with the following default values:

```css
nav {
  display: block;
}
```
